-!- COFACTOR: Binds 2 Fe/S clusters: 1 4Fe-4S cluster 4Fe-20-2S cluster (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the HCP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Genome sequence and analysis of the oral bacterium Fusobacterium nucleatum strain ATCC 25586.";

"Product binding and role of the C-terminal region in c

"product binding and role aldolase.";

Nat. Struct. Biol. 4:36-39(1997).

-i. CATALYTIC ACTIVITY: D-fructose 1,6-bisphosphate = g

phosphate + D-glyceraldehyde 3-phosphate.

-i. PATHWAY: Glycolysis; sixth step.

-i. PATHWAY: Glycolysis; sixth step.

-i. SUBUNIT: TETRAMER OF NEARLY IDENTICAL CHAINS, ALPHA

DIFFER AT ONLY 1 POSITION. N-360 IN THE ALPHA CHAIN.

TO D-360 IN THE BETA CHAIN.

-i. MISCELLANEOUS: In vertebrates, three forms of this

glycolytic enzyme are found, aldolase A in muscle,

liver and aldolase C in brain.

-i. SIMILARITY: Belongs to class I fructose-bisphosphat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in class

Patent No. 6337385

GENERAL INFORMATION:

APPLICANT: Muir, Tom

APPLICANT: Mo. 6337385ick, Richard P.

APPLICANT: Beavis, Ronald

APPLICANT: Beavis, Ronald

APPLICANT: Ji, Guangyong

TITLE OF INVENTION: NOVEL STAPHYLOCOCCUS PEPTIDES FOR BACTERIAL

TITLE OF INVENTION: NOVEL STAPHYLOCOCCUS PEPTIDES FOR BACTERIAL

CURRENT FILING DATE: 1999-06-24

PRIOR APPLICATION NUMBER: US/09/339,511

CURRENT FILING DATE: 1999-06-24

PRIOR FILING DATE: 1998-06-24

NUMBER OF SEQ ID NOS: 8

SOFTWARE: PATENTION OF SEQ ID NOS: 8

ORGANISM: Artificial Sequence

PEATURE:

ORGANISM: Artificial Sequence

PEATURE:

OTHER INFORMATION: Description of Artificial Sequence: Synthetic

NAME KEY: VARIANT

LOCATION: (5)

OTHER INFORMATION: Xaa represents any amino acid at this position.
